- ▶ Use a single button panel or combine multiple button panels to accommodate a broad variety of system designs
- ▶ DIP switches are used to set unique eBUS device addresses and minimize setup time
- ▶ Includes one-gang black and white faceplates and mud ring
- ▶ Section 508 Compliant

The Extron EBP 50 eBUS® Button Panel is a fully-customizable AV system control interface designed for use with Extron eBUS-enabled control systems. This easy-to-use control panel connects to an IPCP Pro control processor to perform a wide variety of AV system functions such as display On/Off, input switching, volume control, and much more. Six dual colored backlit buttons provide easy operation in low-light environments. eBUS button panels are linked to the control processor and to each other using a single cable that carries both power and communication.

DESCRIPTION

eBUS button panels connect using a unique digital bus architecture that allows for easy control system expansion, greater design options, and future upgrades. Button panels are linked to the control processor and to each other using a single cable that carries both power and communication. This efficient, expandable design allows a button panel to be used as a single user interface in a smaller system or combined with other button panels and touchpanels when a more elaborate control system is required.

Since eBUS button panels have the same physical appearance as Extron's broad range of MediaLink controllers, they can be used alongside them throughout a facility while preserving a consistent look and user experience. Button panels are available with 3 to 14 buttons with convenient button arrangements to suit a broad range of room control needs. Buttons on the EBP 50 can be easily customized using Extron Button Label Generator software.
